### Healthy Nutrition

• Our meals are prepared with fresh seasonal products, rich in vitamins that help remove the harmful toxins from the body. Boiled, steamed or grilled food by applying Greek homemade recipes with pure virgin olive oil from our own farm.

### THERMAL CLASSIC CURE PROGRAMME

Therapeutic program for health Rehabilitation, Prevention and Rejuvenation.

People since ancient times have enjoyed the benefits of hot thermal baths and used them as alternative treatments for various chronic diseases. Relaxing spa baths, massages, swimming in warm thermal water and body wraps with natural thermal mud stimulate blood circulation, relax muscles, soothe arthritis pain and help the body regain its mobility. After all, the thermal waters of Edipsos in Greece have been famous for their healing properties since the time of the “father of Medicine”, Hippocrates, in 500 BC. ca., who recommended hydrotherapy for the cure of rheumatism. They emerge from a depth of 2500 meters at a temperature of 75-85 °C and are rich in mineral salts and trace elements.

### ANTISTRESS PROGRAMME

The intense rhythms of everyday life and the pursuit of success combined with bad eating habits are the main factors for emotional and physical fatigue. In the end, our lack of energy creates anxiety,

symptoms of chronic stress, headaches, makes us irritable, impatient, disrupts our psychosomatic balance and efficiency.

### **DETOX PROGRAMME**

Our body is naturally equipped with its own detoxification process, but in the modern lifestyle the abundance of information makes us expect more in less time and this situation leaves us no time to take care of our health and happiness. So we forget that our body needs more than food and water. We make sure to clean our house regularly because otherwise our health is at risk. Do we do the same with our bodies? How many times do we throw away the "garbage" that has accumulated inside us, which steals our energy and endangers our physical health? Toxic substances enter the body through breathing, through food and finally the body itself produces them as a result of chemical reactions of its function.
